Python	
JavaScript	
HTML5	
CSS	

Key Projects / Involvements

Flexhour

A labour job posting app where users can post jobs and other people can accept them. Has integrated Map APIs and Stripe payment gateways to save the clients money in Escrow and for releasing payments. A full production app made with Flutter and Firebase which you can find on App Store.

Smart Wallet

A Business Application for an overseas company where they can save their documents, pictures and all other meaningful data into different categories. Has tons of customization for users. Users can upload and download documents anytime they want. You can find this app on Play Store and App Store.

Music Player

A Desktop Application where users can listen to songs and recordings. Users can import music documents can listen to them anytime they want.

Weather App

Developed the app using Flutter. Used weather APIs to get the latest and most efficient weather information of the area maintaining a great UI design.
